## **NATIONAL RESEARCH COUNCIL TO WORK WITH JOHNSON SYSTEMS TO COMPLETE PRESIDOR™**

The National Research Council of Canada is working with Johnson Systems Inc. to expedite the final development of the **Presidor™** LED Lighting Control System.

**CALGARY, Alberta, January 30, 2018**– JOHNSON SYSTEMS INC. (JSI), an architainment lighting control company, announced today that the National Research Council of Canada is working along side Johnson Systems Inc. to help expedite the final development of the **Presidor™ LED Lighting Control System**.

*“Having the National Research Council of Canada come along side Johnson Systems to help expedite the completion of **Presidor™** is invaluable. Their expertise and 100+ years of experience will allow JSI to fast track the final development of the initial products on their way towards commercialization. We are excited about the growing support and shared belief of the incredible impact that these products will have environmentally as well as on our industry”, says founder and CEO, Shaun Johnson*

As LED’s began to turn the lighting industry on its head, JSI set its development team to create a “next-generation” LED Dimming system and architainment control system unlike anything in the Global Market. What JSI has created has both new and retrofit applications for every theatre, church, convention center, office building, warehouse, parkade, smart city, hotel, school, and more. Presidor™ is a Patent Pending, fully architectural lighting control system in a user friendly touchscreen package designed to install in a single gang electrical back box. Both the National Research Council of Canada as well as our Provincial government have backed the development of Presidor™ with grants and support and we hope to be able to showcase Presidor™ at the October LDI 2018 tradeshow with sales starting in 2019. In addition to a stand-alone series of LED dimmer racks and multi-room controls, Presidor™ has been developed for use in the retrofit of various common dimming systems permitting a leap to the newest technology at a fraction of the cost of a new system.

**For over 30 years, Johnson Systems Inc. has provided state of the art, retrofit lighting solutions to museums, auditoriums, theatres, conference centres, theme parks and more.**
